Numerical Methods for Engineers and Scientists Using MATLAB® Ramin S. Esfandiari

Designed to benefit scientific and engineering applications, **Numerical Methods for Engineers and Scientists Using MATLAB®** focuses on the fundamentals of numerical methods while making use of MATLAB software. The book introduces MATLAB early on and incorporates it throughout the chapters to perform symbolic, graphical, and numerical tasks. The text covers a variety of methods from curve fitting to solving ordinary and partial differential equations.

- Provides fully worked-out examples showing all details
- Confirms results through the execution of the user-defined function or the script file
- Executes built-in functions for re-confirmation, when available
- Generates plots regularly to shed light on the soundness and significance of the numerical results

Created to be user-friendly and easily understandable, **Numerical Methods for Engineers and Scientists Using MATLAB®** provides background material and a broad introduction to the essentials of MATLAB, specifically its use with numerical methods. Building on this foundation, it introduces techniques for solving equations and focuses on curve fitting and interpolation techniques. It addresses numerical differentiation and integration methods, presents numerical methods for solving initial-value and boundary-value problems, and discusses the matrix eigenvalue problem, which entails numerical methods to approximate a few or all eigenvalues of a matrix. The book then deals with the numerical solution of partial differential equations, specifically those that frequently arise in engineering and science.

The book presents a user-defined function or a MATLAB script file for each method, followed by at least one fully worked-out example. When available, MATLAB built-in functions are executed for confirmation of the results. A large set of exercises of varying levels of difficulty appears at the end of each chapter. The concise approach with strong, up-to-date MATLAB integration provided by this book affords readers a thorough knowledge of the fundamentals of numerical methods utilized in various disciplines.

From reader reviews:

Thad Whitehead:

What do you about book? It is not important along? Or just adding material if you want something to explain what yours problem? How about your free time? Or are you busy particular person? If you don't have spare time to accomplish others business, it is make one feel bored faster. And you have free time? What did you do? Everybody has many questions above. They need to answer that question mainly because just their can do in which. It said that about reserve. Book is familiar in each person. Yes, it is right. Because start from on kindergarten until university need this Numerical Methods for Engineers and Scientists Using MATLAB® to read.

Brenda Evans:

The publication with title Numerical Methods for Engineers and Scientists Using MATLAB® possesses a lot of information that you can discover it. You can get a lot of profit after read this book. This kind of book exist new expertise the information that exist in this book represented the condition of the world at this point. That is important to yo7u to know how the improvement of the world. This kind of book will bring you within new era of the globalization. You can read the e-book with your smart phone, so you can read this anywhere you want.

Chris Walker:

Numerical Methods for Engineers and Scientists Using MATLAB® can be one of your beginning books that are good idea. We recommend that straight away because this publication has good vocabulary that will increase your knowledge in terminology, easy to understand, bit entertaining but nevertheless delivering the information. The author giving his/her effort to place every word into enjoyment arrangement in writing Numerical Methods for Engineers and Scientists Using MATLAB® although doesn't forget the main position, giving the reader the hottest and also based confirm resource data that maybe you can be among it. This great information may drawn you into new stage of crucial pondering.

Marge Lee:

Reading a book for being new life style in this calendar year; every people loves to examine a book. When you go through a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, due to the fact book has a lot of information upon it. The information that you will get depend on what forms of book that you have read. If you want to get information about your study, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this sort of us novel, comics, along with soon. The Numerical Methods for Engineers and Scientists Using MATLAB® provide you with a new experience in reading through a book.
