Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures

Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures

Health Assessment of Engineered Structures has become one of the most active research areas and has attracted multi-disciplinary interest. Since available financial resources are very limited, extending the lifespan of existing bridges, buildings and other infrastructures has become a major challenge to the engineering profession world-wide. Some of its related areas are only in their development phase. As the study of structural health assessment matures, more new areas are being identified to complement the concept.

This book covers some of the most recent developments (theoretical and experimental) and application potentials in structural health assessment. It is designed to present currently available information in an organised form to interested parties who are not experts in the subject.

Each chapter is authored by the most active scholar(s) in the area. After discussing the general concept, various currently available methods of structural health assessment (such as the use of smart sensors) are presented. Health Assessment discusses the following: sensor types, platforms and data conditioning for practical applications; wireless collection of sensor data, sensor power needs and on-site energy harvesting; and long term monitoring of structures. Uncertainty in collected data is also extensively addressed. A chapter discussing future directions in structural health assessment is also included.

Readership: Students (undergraduate and graduate), researchers (academic and industrial), and practitioners (government and private) interested in structural engineering.

From reader reviews:

Darcie Hartman:

Book is written, printed, or descriptive for everything. You can know everything you want by a publication. Book has a different type. To be sure that book is important point to bring us around the world. Adjacent to that you can your reading proficiency was fluently. A book Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures will make you to always be smarter. You can feel a lot more confidence if you can know about anything. But some of you think which open or reading the book make you bored. It is far from make you fun. Why they are often thought like that? Have you searching for best book or suitable book with you?

Gertrude Knudsen:

Information is provisions for individuals to get better life, information currently can get by anyone at everywhere. The information can be a information or any news even restricted. What people must be consider any time those information which is within the former life are hard to be find than now is taking seriously which one is suitable to believe or which one the actual resource are convinced. If you receive the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All those possibilities will not happen throughout you if you take Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures as your daily resource information.

Brad Sharpe:

The book Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures will bring that you the new experience of reading a new book. The author style to clarify the idea is very unique. When you try to find new book to study, this book very suitable to you. The book Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures is much recommended to you to study. You can also get the e-book through the official web site, so you can more easily to read the book.

Nancy Steffen:

Do you one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Attempt to pick one book that you find out the inside because don't assess book by its cover may doesn't work here is difficult job because you are frightened that the inside maybe not seeing that fantastic as in the outside appearance likes. Maybe you answer could be Health Assessment of Engineered Structures: Bridges, Buildings and Other Infrastructures why because the great cover that make you consider in regards to the content will not disappoint anyone. The inside or content will be fantastic as the outside or maybe cover. Your reading sixth sense will directly guide you to pick up this book.
