Semialgebraic Statistics and Latent Tree Models (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) Piotr Zwiernik

Semialgebraic Statistics and Latent Tree Models explains how to analyze statistical models with hidden (latent) variables. It takes a systematic, geometric approach to studying the semialgebraic structure of latent tree models.

The first part of the book gives a general introduction to key concepts in algebraic statistics, focusing on methods that are helpful in the study of models with hidden variables. The author uses tensor geometry as a natural language to deal with multivariate probability distributions, develops new combinatorial tools to study models with hidden data, and describes the semialgebraic structure of statistical models.

The second part illustrates important examples of tree models with hidden variables. The book discusses the underlying models and related combinatorial concepts of phylogenetic trees as well as the local and global geometry of latent tree models. It also extends previous results to Gaussian latent tree models.

This book shows you how both combinatorics and algebraic geometry enable a better understanding of latent tree models. It contains many results on the geometry of the models, including a detailed analysis of identifiability and the defining polynomial constraints.

From reader reviews:

Jewel Tarr:

Have you spare time for the day? What do you do when you have far more or little spare time? Sure, you can choose the suitable activity with regard to spend your time. Any person spent their spare time to take a walk, shopping, or went to the actual Mall. How about open or perhaps read a book allowed Semialgebraic Statistics and Latent Tree Models (Chapman & Hall/CRC Monographs on Statistics & Applied Probability)? Maybe it is to become best activity for you. You realize beside you can spend your time with the favorite's book, you can better than before. Do you agree with the opinion or you have other opinion?

Christine Flint:

What do you ponder on book? It is just for students since they're still students or that for all people in the world, the actual best subject for that? Only you can be answered for that question above. Every person has various personality and hobby per other. Don't to be forced someone or something that they don't would like do that. You must know how great along with important the book Semialgebraic Statistics and Latent Tree Models (Chapman & Hall/CRC Monographs on Statistics & Applied Probability). All type of book can you see on many sources. You can look for the internet solutions or other social media.

Robert Banks:

The book untitled Semialgebraic Statistics and Latent Tree Models (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) contain a lot of information on that. The writer explains her idea with easy technique. The language is very simple to implement all the people, so do not really worry, you can easy to read the item. The book was written by famous author. The author provides you in the new period of time of literary works. It is possible to read this book because you can keep reading your smart phone, or gadget, so you can read the book throughout anywhere and anytime. In a situation you wish to purchase the e-book, you can open up their official web-site in addition to order it. Have a nice examine.

Sandra Brown:

A lot of reserve has printed but it is different. You can get it by internet on social media. You can choose the best book for you, science, comic, novel, or whatever by searching from it. It is identified as of book Semialgebraic Statistics and Latent Tree Models (Chapman & Hall/CRC Monographs on Statistics & Applied Probability). You can contribute your knowledge by it. Without leaving the printed book, it can add your knowledge and make anyone happier to read. It is most crucial that, you must aware about book. It can bring you from one location to other place.
