Quercus ilex L. ecosystems: function, dynamics and management (Advances in Vegetation Science)

Quercus ilex L. ecosystems: function, dynamics and management (Advances in Vegetation Science)

Holm oak (*Quercus ilex* L.) forests and woodlands have been considered as a paradigm for Mediterranean terrestrial ecosystems. In the western part of the Mediterranean Basin, these forests and woodlands occupy large areas and thus play a very important role in the landscape. A number of research projects from the Centre d'Ecologie Fonctionnelle et Evolutive (CEFE), the Centre de Recerca Ecologica i Aplicacions Forestals (CREAF), and from many other laboratories are currently focusing on *Q. ilex* ecosystems, and a number of problems have appeared concerning not only basic knowledge but also management aspects. For this reason, the CEFE and the CREAM decided to jointly organize the workshop on *Quercus ilex* L. Ecosystems, which was held in Montpellier and Barcelona in September 1990. The present volume consists of a selection of papers presented during the workshop and other papers contributed after the workshop. The papers are divided into five sections: Biogeography and History; Structure, Productivity and Dynamics; Water Relationships; Nutrient Cycling; and Management.
