Solid-State Lasers and Applications (Optical Science and Engineering)

Solid-State Lasers and Applications (Optical Science and Engineering)

Because of the favorable characteristics of solid-state lasers, they have become the preferred candidates for a wide range of applications in science and technology, including spectroscopy, atmospheric monitoring, micromachining, and precision metrology. Presenting the most recent developments in the field, Solid-State Lasers and Applications focuses on the design and applications of solid-state laser systems.

With contributions from leading international experts, the book explores the latest research results and applications of solid-state lasers as well as various laser systems. The beginning chapters discuss current developments and applications of new solid-state gain media in different wavelength regions, including cerium-doped lasers in the ultraviolet range, ytterbium lasers near 1 μ m, rare-earth ion-doped lasers in the eye-safe region, and tunable Cr²⁺:ZnSe lasers in the mid-infrared range. The remaining chapters study specific modes of operation of solid-state laser systems, such as pulsed microchip lasers, high-power neodymium lasers, ultrafast solid-state lasers, amplification of femtosecond pulses with optical parametric amplifiers, and noise characteristics of solid-state lasers.

Solid-State Lasers and Applications covers the most important aspects of the field to provide current, comprehensive coverage of solid-state lasers.

From reader reviews:

Kevin White:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each publication has different aim or perhaps goal; it means that book has different type. Some people sense enjoy to spend their time to read a book. They are really reading whatever they consider because their hobby is definitely reading a book. Consider the person who don't like reading a book? Sometime, individual feel need book once they found difficult problem or even exercise. Well, probably you'll have this Solid-State Lasers and Applications (Optical Science and Engineering).

Sophia Myers:

As people who live in the actual modest era should be change about what going on or details even knowledge to make these keep up with the era which can be always change and make progress. Some of you maybe can update themselves by reading through books. It is a good choice for you personally but the problems coming to a person is you don't know what one you should start with. This Solid-State Lasers and Applications (Optical Science and Engineering) is our recommendation to make you keep up with the world. Why, because book serves what you want and want in this era.

Deidra Hird:

Information is provisions for individuals to get better life, information today can get by anyone on everywhere. The information can be a expertise or any news even a concern. What people must be consider whenever those information which is in the former life are challenging be find than now could be taking seriously which one is appropriate to believe or which one the particular resource are convinced. If you receive the unstable resource then you have it as your main information there will be huge disadvantage for you. All those possibilities will not happen inside you if you take Solid-State Lasers and Applications (Optical Science and Engineering) as your daily resource information.

Adam Blandford:

What is your hobby? Have you heard that question when you got college students? We believe that that issue was given by teacher to their students. Many kinds of hobby, Everyone has different hobby. So you know that little person including reading or as studying become their hobby. You need to understand that reading is very important in addition to book as to be the point. Book is important thing to include you knowledge, except your own personal teacher or lecturer. You discover good news or update with regards to something by book. Amount types of books that can you decide to try be your object. One of them is actually Solid-State Lasers and Applications (Optical Science and Engineering).
